Friends of Reservoirs Small Grant Committee,

The Denison District Fisheries Management office of the Texas Parks and Wildlife Department fully supports Mr. Cottingham's proposed small grant application to improve upon existing and degrading fish habitat at Ray Roberts Reservoir.

The U.S. Army Corps of Engineers established large brush piles during construction of the reservoir in the late 1980's which have provided fish habitat for decades and are still popular locations for anglers to target fish. This project is hopefully the first of multiple efforts to restore those degrading structures and continue to maintain this habitat for the fish and future anglers.

Sincerely,

Dan Bennett
